General Information

The Solenoid Valve TV 88/89 can be fitted to all TYFON® sound emitters types KT 75/- and MKT 75/-.

The valve can be mounted indoors or encased outdoors. The best mounting is with the solenoid upright and vertical. For distinct code signals, the pipe must not be longer than 6m between the valve and TYFON.

A choke disc with reduced orifice must be inserted at the valve or before the TYFON.

Blow the pipe line thoroughly clean with compressed air before connecting to signalling apparatus.

When ordering, state valve type, voltage and working pressure. For working pressure table, dimensions and reference numbers, see next page.
